SUMMARY

I'm Software Developer with over 2+ years' experience with using JavaScript, TypeScript, React.js, Node.js and SQL to create and maintain well tested and scalable websites, web applications, and REST API's. I have extraordinary passion for learning and problem solving while enjoying working alongside with other great minds in an agile team environment with exceptional abilities to lead and take on difficult tasks while striving to grow to my highest potential as Software Developer.

SKILLS

• React.js	• Redux	• Next.js	• JavaScript	• TypeScript
• HTML	• CSS	• SASS	• UI/UX	• Debugging
• Node.js	• Express	• REST API's	• SQL	• MySQL
• Azure	• Git	• Version Control	• Unit Testing	• Scrum

MY WORK

Piranha Pools Service & Booking: www.piranhapools.com
- Locally owned small pool cleaning and supply business where I was brought on to develop and maintain their booking and all-purpose service website while also continuing to develop a beautiful new website built with React.js.
- Demonstrating my abilities to work hands on with clients to take their dreams and visions and deliver my best possible work while actively involving them in the software development lifecycle.
- Actively implementing and brainstorming software business solutions for continued company growth.

Portfolio: www.hunterfoulk.com
- My personal portfolio and blog website built with Gatsby.js for best possible performance and optimization.
- Leveraged UI/UX design abilities to display my skills and abilities along with projects that I have developed over the many years in my software career.
- Incorporated personal email API using Node.js for me to receive personal emails and inquiries from interested visitors using the contact form located in the bottom section of my portfolio.

Apex Training Software (PWA): www.apextrainingapp.com
- Interactive progressive web application built and architected with Next.js and Tailwind CSS.
- Allow trainers of Apex Performance Facility to create account and securely sign in accomplished using JSON Web Tokens.
- Personal client scheduling and intergraded appointment calendar achieved using MySQL for a storage database for appointments hosted through a Azure MySQL instance.

KP Construction LLC: www.keithphillingane.com
- Established an email server engineered with Express.js and Nodemailer.js for potential inquiries.
- Polished react website built alongside HTML5 and SCSS to display full service and portfolio gallery.

EXPERIENCE

Freelance Developer
September 2020 – present

- Implemented cross browser and device compatible web components using various front-end framework such as React, Next.js and Gatsby.js.
- Architected complex state management flow between component driven websites and web applications with Redux and Context API.
- Designed and developed the entire UI/UX design for various content owners, creating a user-friendly website to attract and retain more clients and site traffic.
- Maintained a booking website powered by GoDaddy, ultimately streamlining the booking process and enhancing user experience.
- Worked hands on with company leaders to brainstorm new brand designs and UI/UX layouts.
- Established multiple web servers built with Node.js and express with 100% up time using Heroku and Azure web hosting.
